1. IDENTIFICATION OF SUBSTANCE / MIXTURE AND SUPPLIER

Product name: Baysol® Snail and Slug Bait
Other names: None
Product code: 4952587 (250 g), 4952595 (600 g)
Chemical group: Carbamate
Recommended use: Molluscicide
Formulation: Ready to use bait (RB)
Supplier: Bayer Environmental Science – A Business Group of Bayer CropScience Pty Ltd
Address: 391 - 393 Tooronga Road, East Hawthorn
Victoria 3123, Australia
Telephone: (03) 9248 6888
Facsimile: (03) 9248 6800
Website: www.bayercropscience.com.au
Contact: Technical Manager (03) 9248 6888
Emergency Telephone Number: 1800 033 111 – Orica SH&E Shared Services

2. HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW
HAZARDOUS SUBSTANCE (see Risk phrases below) – NON DANGEROUS GOOD
Cholinesterase inhibitor. Harmful to aquatic organisms. Dangerous to domestic animals and wildlife.

Risk phrases: R22 – Harmful if swallowed.
Safety phrases: See Sections 4, 5, 6, 7, 8, 9, 13
ADG classification: Not "Dangerous goods" for transport by road or rail according to the Australian Code for the Transport of Dangerous Goods by Road and Rail.
SUSDP classification: Schedule 5 (Standard for the Uniform Scheduling of Drugs and Poisons)

This product contains BITREX™ which is a deterrent designed to prevent domestic animals eating the bait pellets.
4. FIRST AID MEASURES

If poisoning occurs, immediately contact a doctor or Poisons Information Centre (telephone 13 11 26), and follow the advice given. Show this Material Safety Data Sheet to the doctor.

Inhalation
Presentation as bait pellets makes inhalation unlikely.

Skin contact
Immediately remove contaminated clothing. Wash skin with soap and water. Seek medical attention if irritation develops or persists. If signs of poisoning occur get medical attention immediately. Persons assisting the patient should protect themselves from contamination. If advised by doctor or Poisons Information Centre, atropine tablets may be administered.

Eye contact
Rinse eyes immediately with clean water for at least 15 minutes and obtain medical aid, preferably from an eye specialist.

Ingestion
Wash out mouth with water. Keep patient at rest and seek urgent medical advice as above. Transport patient to doctor or hospital quickly. If advised by doctor or Poisons Information Centre, atropine tablets may be administered. DO NOT attempt to give anything by mouth to a semi-conscious or unconscious person.

First Aid Facilities
Provide eyewash and safety shower facilities in the workplace. Obtain an emergency supply of atropine tablets 0.6 mg.

Medical attention
Methiocarb belongs to the carbamate group of insecticides, which are acetylcholinesterase inhibitors. Inhibition of acetylcholinesterase results in accumulation of the neurotransmitter acetylcholine in the central and peripheral nervous system.

Symptoms of poisoning
Mild intoxication causes headache, blurred vision, weakness, sweating, mild chest pain, nausea and vomiting. Severe intoxication causes cyanosis, muscular twitching, spasms, miosis and respiratory paralysis. Onset of symptoms may be delayed. Cholinesterase inhibition sometimes persists for several weeks.

Treatment
Basic aid, decontamination, symptomatic treatment and if necessary administration of antidote.

Note for physicians
Endotracheal intubation should be done and gastric lavage performed, followed by administration of charcoal. Treatment is with atropine sulphate. Additionally diazepam should be given in case of seizures/convulsions. Atropine should not be given to a cyanosed patient. Monitor respiratory, cardiac and central nervous system functions. Monitor red blood cell and plasma cholinesterase levels. Administer oxygen if necessary. Watch for pulmonary oedema and delayed neurological symptoms. Contraindications include oximes (pralidoxime, oblidoxime), succinyl chloride and aminophylline.

2 regimens for initial atropine treatment are currently suggested, in both cases the cessation of the cholinergic symptoms salivation, bronchial secretion, sweating and bradycardia indicates sufficient atropinization. The skin should be dry, the lungs should be clear on auscultation and the heart rate should be in a range of 80 to 100/minute.
4. FIRST AID MEASURES - continued

Overdoses of atropine have to be strictly avoided, as these can promote heart rhythm disturbances (torsades des pointes).

Regimen 1: (2-10 mg atropine i.v., followed every 15 minutes by 2 mg atropine i.v. until cessation of the symptoms.

Regimen 2:
- 2 mg atropine i.v., 5 minutes wait, if symptoms persist or reappear
- 4 mg atropine i.v., 5 minutes wait, if symptoms persist or reappear
- 8 mg atropine i.v., 5 minutes wait, if symptoms persist or reappear
- 16 mg atropine i.v., 5 minutes wait, if symptoms persist or reappear
- 32 mg atropine i.v.

No higher doses of atropine should be given nor are necessary.

It is mandatory to allow 5 minutes after each dose for atropine to become fully effective, the next higher dose must not be given earlier and only if the above symptoms are persisting. Regimen 2 currently is advisable. If further atropine treatment is required (taking into account the relatively short effect of carbamates), it should be done by continuous application of 1 – 2 mg/hour. Atropine treatment can be stopped, when the plasma cholinesterase level has returned to above 30% of normal.

Veterinary

Dogs find this bait attractive and if ingested it may kill them. If a dog eats pellets take it to a veterinarian immediately.
NB. Ipecac Syrup is not an effective emetic for dogs and is not recommended.

5. FIRE FIGHTING MEASURES

Extinguishing media

Water spray, foam, dry chemical, carbon dioxide, sand.

Hazards from combustion products

In a fire, hydrogen cyanide, carbon monoxide, methyl isocyanate, sulphur dioxide and nitrogen oxides may be formed.

Precautions for fire fighters

Fire fighters should wear full protective gear, including self-contained breathing apparatus (AS/NZS 1715/1716). Keep unnecessary people away and move all other personnel to windward side of fire. Bund area with sand or earth to prevent contamination of drains or waterways. Dispose of fire control water or other extinguishing agent and spillage safely later.
6. ACCIDENTAL RELEASE MEASURES

Dealing with spills and disposals may result in the potential for increased personal exposure. Protective clothing and equipment as described in the PERSONAL PROTECTION section should be worn. Avoid contact with spilled material or contaminated surfaces. Keep people and animals away. Prevent spilled material from entering drains or watercourses. Contain spill and sweep up carefully. Avoid creating dust. Collect and store in recovery drums. Clean floor with a damp cloth and place it in the recovery drum. Seal and label drums for safe disposal. Deal with all spillages immediately. If contamination of drains, streams, watercourses, etc. is unavoidable, warn the local water authority.

7. HANDLING AND STORAGE

Handling
Keep out of reach of children. Product is poisonous if swallowed. Avoid contact with eyes and skin. If product on skin immediately wash area with soap and water. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water. After filling applicator, clean up and contain spilled pellets so that they are not eaten by animals and birds.

Storage
Store in the closed, original container in a dry, cool, well-ventilated, secure area out of direct sunlight. Lock in a safe place preventing access of children, animals, poultry or ducks. Keep away from domestic pets.

Flammability
Not readily combustible.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure standards
There is no NOHSC Exposure standard for methiocarb.

NOHSC Exposure standard for calcium sulphate: TWA: 10 mg/m³ (as inspirable dust)

Definitions:
Exposure standard – Time Weighted Average (TWA) means the average airborne concentration of a particular substance when calculated over a normal eight-hour working day, for a five-day working week.

Biological limit values
None allocated. However, monitoring of manufacturing workers for blood cholinesterase levels is recommended.

Engineering controls
Control process conditions to avoid contact. Use local exhaust ventilation during manufacture. Use this product in a well-ventilated area only.

Personal Protective Equipment
Product is poisonous if absorbed by skin contact, inhaled or swallowed.

- During manufacture a respirator or hood with an independent air supply should be worn. If dust is formed in handling the bait pellets, a disposable dust mask should be worn.
- Wear goggles.
- Wear cotton overalls buttoned to the neck and wrist.
- Wear elbow-length PVC gloves if there is a possibility of skin contact.

11. TOXICOLOGICAL INFORMATION

POTENTIAL HEALTH EFFECTS

Methiocarb, the active ingredient in Baysol Snail and Slug Bait, is a carbamate pesticide which is a cholinesterase inhibitor. Symptoms typical of cholinesterase inhibition (for all routes of entry):

Mild cases
Headache, blurred vision, weakness, sweating, mild chest pain, nausea and vomiting.

Severe cases
Cyanosis (blueness of the skin, as from lack of oxygen), muscular twitching, spasms, miosis (pinpoint pupils) and respiratory paralysis. These symptoms commence from one to three hours after excessive exposure.

Dogs find this bait attractive and if ingested it may kill them.

Inhalation
Methiocarb is very poisonous by inhalation. Inhalation of the bait pellets containing 2% methiocarb is unlikely, unless dust is created.

Skin contact
Poisonous if absorbed by skin contact, but this route of exposure is unlikely. Not expected to irritate the skin.

Eye contact
May irritate the eyes.

Ingestion
Harmful if swallowed.

ANIMAL TOXICITY DATA - PRODUCT

Acute:
Oral toxicity \( \text{LD}_{50} \) rat: > 500 to < 1000 mg/kg
Dermal toxicity \( \text{LD}_{50} \) rat: > 2000 mg/kg
Inhalation toxicity \( \text{LC}_{50} \) (4 h) rat: > 0.224 mg/L – dustable powder – highest producible concentration

Skin irritation
Non irritant (rabbit)

Irritation to mucous membranes
Non irritant (rabbit)

Sensitisation
Not a skin sensitiser.

Chronic:
The main health effects from repeated exposure would be toxic symptoms of cholinesterase inhibition as described above. Methiocarb showed no evidence of oncogenic or carcinogenic potential in animal studies. Methiocarb is not mutagenic, and has shown no teratogenic effects in animal studies. It does not cause delayed neurotoxicity. In the USA methiocarb is considered to be a developmental toxicant.
12. ECOLOGICAL INFORMATION

Harmful to aquatic organisms. This product is dangerous to game, wild birds and animals. Methiocarb has a repellant effect on birds. It is dangerous to bees and dangerous to fish. DO NOT contaminate streams, rivers or waterways with Baysol Snail and Slug Bait or the used containers.

Ecotoxicity

Methiocarb:

Fish toxicity:
LC50: 0.65 mg/L (96 h); bluegill sunfish (Lepomis macrochirus)
LC50: 1.1 mg/L (96 h); trout (Oncorhynchus mykiss)

Aquatic invertebrate toxicity:
EC50: 7.7 µg/L (48 h); water flea (Daphnia magna)

Algae toxicity:
Growth rate:
IC50: 2.2 mg/L (72 h); green algae (Scenedesmus subspicatus)

Bird toxicity:
LD50: 5 to 10 mg/kg; Japanese quail
LD50: 7.1 to 9.4 mg/kg; male mallard ducks

Environmental fate, persistence, degradability, mobility

Degradation of methiocarb in soil is rapid. Photodegradation contributes to the overall elimination of methiocarb from the environment - DT50 = 6 to 16 days.

13. DISPOSAL CONSIDERATIONS

Ensure container is completely empty before disposal. Dispose of empty container by wrapping in paper, placing in plastic bag and putting in household garbage.

14. TRANSPORT INFORMATION

UN number: Not applicable
Proper shipping name: Not applicable
Class and Subsidiary Risk: Not applicable
Packing Group: Not applicable
EPG: Not applicable
Hazchem code: Not applicable
Marine Pollutant: No

15. REGULATORY INFORMATION

Registered according to the Agricultural and Veterinary Chemicals Act 1988
Australian Pesticides and Veterinary Medicines Authority Approval Number: 51851
